

Dear Hiring Manager,

**General Electric are one of the best companies in the World to work in Automation, data analytics, technology solutions, Electrical Solutions, Engineering Solutions and Software Engineering Technologies, and working on the projects would be a Dream for me. I believe working as a team in these projects would help me immensely for my future as well as would help me to learn new things and develop my skills.**

I am a keen developer, **hardworking, dedicated and I love to learn.** I am extremely interested in your projects and technologies and would like to work for you. I also have studied about and have little practical knowledge about **SDLC, Software Testing and Software Automation, because I am implementing the same in my Software Engineering Lab project,** I always try to seek learning opportunities and try to learn from them. Though **my academic grades are low,** I try my best to **compensate on that using my practical knowledge and you can always test me on that. I am not a parrot to mug up things, I prefer to reflect that on my work.** My skillset humbly boasts of **Software Development using JAVA, PYTHON, C++.**

More importantly, an internship with GE would be mutually beneficial. Your company has an excellent reputation, and I know that the combination of my experience, skill, education, hard work and motivation to excel will make me an asset to your development team.

**It would be an honour for me to work with GE if opportunities are given and I would try my best to give my 100% performance.**

I have **attached my CV,** it would be my greatest honour if you kindly **enumerate it and provide me an internship in the Software Engineering field,** assessing my skillsets, not my CGPA.
